EMX Digital
222 North LaSalle Street
Suite 1650
Chicago, IL 60601

Dear EMX Digital Team,

I am currently applying for the position of Lead or Senior Software Engineer. I found your listing on Indeed and feel I would be a great fit for your team and your business. I have been working in the development industry for approximately 10 plus years now and have had the opportunity to work with tons of fantastic clients and unique projects. I specialize in custom PHP application development, API integrations and long term development strategies for each of my current clients. Being creative, thinking outside the box and delivering above client expectations has become a corner stone of my career and I love every minute of it!

I have been working in the team Agile development environment for a very long time. So I am no stranger to taking initiative on projects to see them to completion and deployment. Also, I have experience working with several tools such as Node.js, Amazon Web Services, PHP, Javascript, NodeJS, HTML5 and SaaS. Mobile first development is something that has become a staple in my every day development, along with cross browser compatibility testing and A/B testing. I strive to push the envelope in all areas of development and look forward to any opportunity to share that drive with your company.

I have several coding examples that I can send your way for further review and discussion. I would greatly appreciate the opportunity to talk to you more about your goals and objectives for this position and what I might be able to do to server you! Thank you so much for your time, I look forward to hearing from you!

Sincerely,

Tyler Jones
